## HIGH VISIBILITY — BOMBER & PARKA SYSTEMS

### Majestic Jacket Systems

Changing weather conditions require versatile protective clothing that is adaptable to the elements and remains comfortable to workers. As conditions can sometimes rapidly shift throughout the day, it is critical to choose the proper safety apparel that can accommodate weather changes while maintaining the safety and comfort workers need. This will support a safe work environment, steady productivity, and company compliance policies.

Majestic's high visibility jacket systems provide ANSI 107-2015 Class 3 and Class 2 compliant components that will accommodate changing weather conditions. From a full jacket ensemble with a fleece or soft shell liner, to a Class 2 fleece vest, our high visibility jacket systems will keep you visible and comfortable against the worst conditions.

### 8 different configurations

1. Full jacket ensemble—jacket & liner
2. Full jacket & fleece vest
3. Full jacket without liner
4. Vest jacket without liner—ANSI Class 2
5. Vest jacket & entire fleece liner
6. Vest jacket & vest fleece liner—ANSI Class 2
7. Full fleece liner
8. Fleece vest liner—ANSI Class 2

## 75-1381 / 75-1382 / 75-1383

The Transformer, 8-in-1 bomber. Offers eight varieties of wearing options, which include the basic fully lined Class 3 waterproof jacket, Class 2 vest, a high visibility Class 3 liner, and five more options that can be created depending on the day's weather. The jacket features a detachable hood, ID holder pocket, radio tab straps, a fleece collar, six pockets and many other features which make the Transformer the best high visibility jacket on the market. Meets ANSI / ISEA 107- 2015 Class 3 Type R standard. Liners also sold separately, see page 3 for additional liner options.

75-1381 Yellow. M-6X, LT-4T

75-1382 Orange. M-6X, LT-4T

75-1383 Yellow/Black. M-6X, LT-4T

### Majestic Layering Versatility

The Maxx-On parka and Transformer jacket listed in this section provide you with multiple layering option.

Below, you will find six of them. The 75-1371 and the 75-1071 soft shell jackets provide a tailored professional look whether worn inside or out. The 75-5381/75-5382/75-5383 high viz fleece liners (sold with the Transformer and separately) have multiple wearing options, with their zip off sleeves. The 75-5081 black fleece liner gives you an option to zip out and wear it separately, even off the job site.

**Majestic keeps you warm and stylish, all year round!**

## 75-1307

High visibility yellow parka with waterproof breathable oxford fabric and concealed adjustable hood. Elastic wrist with Velcro closure, stitched and taped seams, harness D ring pass through with storm strap, vented mesh back, zipper storm flap with heavy duty snaps, and side zippers for added comfort and pocket accessibility. Outer pockets with storm flaps, side slash insulated pockets, inside pocket, and mic tabs on each chest. Ability to zip in separate Class 3 fleece liner. Meets ANSI / ISEA 107-2015 Class 3 Type R standard. **For more lining options see below. M-6X, LT-4T**

MAXX-ON®

## 75-1371 / 75-1071

High visibility, nylon/spandex, water resistant and breathable softshell jacket, yellow/black. Meets ANSI / ISEA 107-2015 Class 3 Type R standard. Can be worn separately or used as a liner for the 75-1381 Transformer jacket and 75-1307 MAXX-ON Parka. **M-6X, LT-4T**

75-1071 Black, Non-Ansi. **M-6X, LT-4T**

## 75-5381

High visibility fleece liner, yellow. Zip off sleeves allow it to be worn as a Class 2 vest. With sleeves it meets ANSI / ISEA 107-2015 Class 3 Type R standard. Can be worn separately or used as a liner for the 75-1381 Transformer jacket and 75-1307 MAXX-ON Parka.

75-5382 Orange. **M-6X, LT-4T**

75-5383 Yellow/Black. **M-6X, LT-4T**

## 75-5081

Polar fleece liner, black. Can be worn separately or used as a liner for the 75-1381 Transformer jacket and 75-1307 MAXX-ON Parka. **M-6X, LT-4T**

**75-8207R** High visibility yellow brim hat with sidesnaps and drawstring chinstrap. Regular size.

**75-8207S** Small size.

### ANSI/ISEA 107-2015 High Visibility Safety Apparel Standards:

Low visibility is a serious hazard for all workers who perform tasks near moving vehicles or equipment. High visibility safety apparel by Majestic boldly intensifies worker visibility and safety.

**Garment Types** - High visibility garment types are designated by the work environment in which workers are performing specific tasks. When combined with the existing Performance Classes, this standard provides safety managers with an expanded range of protection levels that address more hazards. These garment types include:

**R** – Roadway Use    **O** – Off-Road Use    **P** – Public Safety

### Performance Standards

Class 2 provides intermediate protection with distance detection and identification, and moderate conspicuity performance. This reflective clothing is suggested for workers who are near heavy machinery or near traffic between speeds of 25-50 mph. Work activity examples: Roadway construction, Airline Ramp, Municipalities

Class 3 offers the highest level of conspicuity with greater visibility to the wearer in both complex backgrounds and through a full range of body movements. This reflective clothing is suggested for workers who are near heavy machinery or near in excess of 50 mph. Work activity examples: Department of Transportation, Municipalities, Flagging, Day & Night Roadway Construction.

Class E includes pants, bib overalls, shorts, and gaiters. These items cannot be worn alone to meet HVSA standards. When a Class E item is worn with Class 2 or 3 garments, the ensemble is considered Class 3.

Non ANSI Site Safety apparel is designed to provide a higher degree of visibility than normal clothing and is intended to offer high visibility apparel for workers performing jobs that require a minimum level of visibility. These garments are not ANSI compliant.

# PROTECTIVE CLOTHING

VISIBILITY—SITE SAFETY

## Site Safety Apparel

Site safety apparel does not meet the rigorous standards of ANSI for visibility. What site safety apparel is designed to do is to provide comfort while still providing higher degrees of visibility than normal clothing. Areas where site safety apparel can be used: construction sights, recycling plants and areas where there is plant traffic, but not at higher speeds. Talk with your on site safety professional to see if site safety apparel is right for your application.

Majestic has introduced a full line of site safety in different weights and make up of fabric.

Another way Majestic makes things easy for you, is personalization. All of these garments can be personalized with striping and logos. Read more about personalization in the later pages of this catalog or please contact your Majestic sales representative to find out more.

## 75-5003 / 75-5004

**Be safe, be seen!**

Although there is no standard for high visibility hand apparel, that doesn't mean we don't care. The gloves on these pages all in some way use materials that are ANSI 107 compliant, for visibility. We care about you and we care about your hands. Simply put, if your hands are more visible, this makes you safer more visible to others.

**ANSI 107**

Made with ANSI 107 (High Visibility Standard) approved materials.

**3228HYT**

Cold weather 15 gauge high visibility nylon outer liner. Insulated brushed 10 gauge acrylic liner with foam nitrile palm dip coating. **XS-XXL**

**3398DNY**

Winter/freezer wear and Waterproof. 15 gauge nylon shell, soft brushed 10 gauge insulated acrylic liner. High visibility yellow knit with closed cell nitrile dip and added sandy nitrile dip palm. Great liquid resistance! **S-XXL**

2145HYH High visibility yellow. XS-XXL

2145HOH High visibility orange. XS-XXL

### Why ARMOR SKIN™?

ARMOR SKIN™ was developed to keep workers comfortable and safe. Leather goods are a commodity, and as such are subject to wild fluctuations in the market. With hide shortages worldwide, we at Majestic were driven with the task of finding “something else” out there. With ARMOR SKIN™, we found it!

ARMOR SKIN™ is the one of the toughest materials on the market—a true synthetic that can provide unmatched abrasion resistance. It is literally stronger than leather. We have measured this by taking samples of material and placing them on our in-house abrasion test machine. The results speak for themselves—we were able to develop a material that provides better abrasion resistance than cowhide and pigskin, and with a far superior fit and feel factor.

ARMOR SKIN™—More wear and abrasion resistant than leather and pound for pound the toughest synthetic glove material available.

Style options include slip-on or with a Velcro wrist strap. The black style is available unlined or with your choice of three levels of cold protection. Great fit, feel and comfort.

All styles come tagged. Available in sizes XS-XXL

## 2123HVY

Knucklehead heavyweight ARMOR SKIN™, PVC reinforced patch palm, high visibility yellow knit back, TPU knuckle, reinforced finger guards, Velcro wrist. S-XXXL

21262HO 100% Cotton cord palm material, TPR impact protection, Elastic stretch cuff, Spandex stretch back, ANSI 107 certified high visibility orange color for added safety. S-XXXL

# PERSONALIZATION

## BRANDING

Branding is a hot die stamp that burns and embosses an image into the surface of leather. It is a simple and economic option to personalize grain leather. There is a 10 dozen minimum for all first orders.

## SPOT COLOR HEAT TRANSFER

A spot color logo is applied with heat to the glove. This process is regarded as our highest quality and best looking personalization process for gloves. Unlike our full color logo, only the image is applied and no contour lines or border is needed. This option is only available when future orders within a year total 300 dozen or more gloves and is restricted to spot color.\*

## HIGH VISIBILITY HEAT TRANSFER DECAL

We are able to heat apply a fully custom 3M reflective logo to any of our garments. This is not only a great looking option, but enhances visibility in most situations. This particular 3M reflective material is regarded as the leader of retro reflective material and complies fully with the American National Standard for High-Visibility Safety Apparel and Headwear ANSI/ ISEA 107-2010 standard. There is a minimum order of one garment.

## FULL COLOR HEAT TRANSFERS

Like the spot color logo process, the full color heat transfers are applied to the glove or jacket with heat. Unlike spot color, as the name implies, the full color heat transfers are full color\*, meaning there are no restrictions such as shading or color blends, making even a photograph possible. With a 10 dozen minimum for all first orders, or one garment minimum, this is a convenient option for smaller orders where a color logo or message is wanted. The only restriction is that the logo must have a border or contour line such as those shown below.

Also available is the option to have anyone of our garments personalized with an employee name.

## RUBBER LOGO

Rubber logos provide a visually appealing dimension to customization. They have excellent detail and clarity with raised letters in bold colors. Minimum quantities are required and vary by style.

## SCREEN PRINTING

Screen printing is the process of applying ink to a garment. Screen printing is restricted by the amount of colors in the logo, but is a very economical option to personalizing logos, particularly in larger quantities.

Majestic's in house screen printing capabilities dramatically decreases the time frame to produce customized apparel.

**PERSONALIZATION**

## EMBROIDERED PATCH

Our embroidered patches are heat applied, preserving the waterproof benefit of the garment, making this an ideal option for those who want the premium embroidery look while still maintaining the integrity of the jacket. With minimum orders of twenty garments this is an outstanding option. Please contact your Majestic distributor as the logo is very important to determine capability and costs.

## EMBROIDERY

Majestic can also embroider garments using the traditional embroidery process. Before deciding, please keep in mind, many of our garments have a waterproof barrier that can be damaged during the embroidery process. Please confirm with your distributor before making the final decision.

## WHAT WE NEED FROM YOU:

All logos submitted must be: Vector image\* in .EPS, .AI, or .PDF format. For personalized full color heat decals, a very high quality 300DPI file is required at the desired size or larger OR Majestic can re-create the logo for an additional charge.

## DEFINITIONS:

**Spot Color:** Are pre-mixed inks. For example, to print a red, green and black apple, red, green and black spot color inks are used.

**Full Color:** With the full color or CMYK process, to print ANY color image, cyan, magenta, yellow and black inks are overlapped to achieve the full color spectrum.

**\*Vector Image:** A vector image is made up of points lines, curves, and shapes, made up or filled in with colors. A bitmap image is made up of an array of pixels often used in photographic images.
