

SCOUT JET LITE

Your Eyes in the Dark.

RED DAWG NOZZLES

How the Scout Works:

1

Connect the Scout to your Jetter Hose and start recording

2

Send the Scout down the line and let it record!

3

Pull the nozzle back and review recorded footage on GoPro App or SD Card!

Overview on Red Dawg Scout

Stop cleaning blind and let the new Red Dawg Scout help you scout out your issues! This one-of-a-kind sewer camera allows you to inspect your pipe and blockages on-site, both efficiently and affordably. A GoPro embedded inside of the body of this nozzle gives you a quick view of recorded video on a phone or tablet while also containing an SD Card which can be used to log video footage on a computer. Lighting is now an issue as the embedded light ring will give you more than enough light in lines up to 24". The Red Dawg Scout can be used on any jetter... any time. As long as you are flowing at least 25 gallons per minute, the Scout will fly up the line and give you a first-hand look of what is going on!
