

CUSTOM GROUT
INSPECTION VEHICLES

BUILT FOR PERFORMANCE. CONTRACTOR-GRADE FOR THE TOUGHEST JOBS.

Trusted by contractors and municipalities, CUES grout vehicles are engineered for durability, efficiency, and complete trenchless rehabilitation solutions. We offer a full line of contractor-grade portable and truck-mounted grout rehabilitation systems built to meet the toughest jobsite demands. Grout packers are available for both mainline and lateral sealing, giving crews the flexibility to adapt to any project.

CUES truck-mounted systems are engineered for maximum productivity, combining mainline and lateral joint sealing with optional advanced CCTV inspection equipment. With ample space for packers and grout materials, these vehicles streamline operations, reduce downtime, and deliver long-term value.

Applications:

- Pipe stabilization and structural support
- Joint testing and chemical sealing
- Low-pressure waterproofing applications
- Manholes, junction boxes, and large-diameter pipe waterproofing

WHY CHOOSE A CUES GROUT TRUCK?

CUES custom Grout Inspection Vehicles deliver unmatched reliability and performance for trenchless rehabilitation projects. Designed for efficiency and durability, these systems handle a wide range of applications including:

Configurable Options:

- Dry freight box systems (ideal for export)
- Trailer-mounted setups
- Retrofit packages
- Multi-function combo trucks (TV, Cutter, Easy Grout)

System Highlights:

- Compatible with Acrylamide and Acrylate grouts
- Contractor-grade portable & truck-mounted options
- Mainline and lateral sealing grout packers available
- Roomy truck design with space for grout materials & packers
- Optional integrated CCTV inspection for seamless workflows

Control Panel: Easy Grout computer program, graphic user interface, intuitive, easy to train, lower operational cost.

Chemical Tanks: Chemical resistant, polypropylene, clearly labeled, can order 30 gallon (114 L) or 60 (227 L) gallon capacity with heaters

Flooring: Rhino Lined Industrial flooring with stainless steel spill containment for grout reel and tank

Walls: Scratch, dent and chemical resistant; grey finish makes the interior brighter

Grout Tank Mixer & Heater: Variable-speed, electric, with small stainless steel propellers located near the bottom of the tank to aid mixing

Reel Frame: Stainless steel construction on all grout-related equipment and components

CAT or GRACO Pumps: Custom build, chemical resistant, explosion proof, nitrogen-charged pulsation dampers and pressure regulators to ensure even pumping for ideal chemical mixture

CAT Pump Motor: Variable speed, stainless steel, chemical resistant, motor

Flush Lines: Manual valves to flush pump and hoses with water

Chemical Filters: Stainless steel filters to protect against deterioration and possibly setting off the chemical

Box Size: Available from 16' to 24' (4.88 m - 7.32 m) custom design builds for contractors or municipalities

Air Compressor: 1 hp with 30-gallon tank

Generator: Typically Onan 7.5kW or higher depending on the pump requirement

Penta Hose: 2 lengths to choose - 500' and 800' (152, 198, 244 m) for manhole, mainline and lateral grouting

Water Tank: Non-metallic, can be heated, 75 gal (284 L) or 100 gal (379 L) capacity

Controls: Computer program and K2, wireless for camera and packer, can control lateral packer using our wireless handheld controller

With CUES grout inspection vehicles, you get more than equipment, you get a long-term investment in productivity, reliability, and infrastructure protection.

BUILT TO PERFORM. BUILT TO LAST. BUILT BY CUES.
